How to Install Third Party AutoCAD Add-on Products The fastest and easiest way to install the third party products is to use Autodesk Exchange Apps. Autodesk Exchange Apps is an online application store where a user can browse and install third party products. Third party products are available free of charge as long as they are not commercial applications. The third party products are shipped from Autodesk Exchange Apps and the application is then installed and activated directly from the Exchange App store. No installation is required on the machine itself. The author of a third party product receives support and updates directly from Autodesk. The last version of the products is listed in the Exchange Apps catalogue on a monthly basis. Third Party AutoCAD Add-on Products

Listing These AutoCAD products are categorized as 3rd party products, so they can be installed directly from Autodesk Exchange Apps without having to install AutoCAD on your computer. In order to install a third party AutoCAD add-on product, go to Autodesk Exchange Apps, then search for the product you are interested in. Then, follow the instructions to find and install the desired application.

ObjectARX for AutoCAD R15 ObjectARX is an add-on technology for AutoCAD R15 that extends the functionality of the drawing tools available in the product. To evaluate the effectiveness and reliability of prenatal diagnosis of neural tube defects by three-dimensional ultrasound (3D ultrasound) combined with real-time two-dimensional ultrasound. From January 1999 to December 2002, 95 cases of neural tube defects were diagnosed by 3D ultrasound and 2D ultrasound, and then the karyotypes were checked, and the outcome was followed up. 95 fetuses with neural tube defects were diagnosed by 3D ultrasound and 2D ultrasound. Most of the neural tube defects were detected by the cranial sonography. The other defects were detected by the whole abdomen sonography. 3D ultrasound could accurately show the defects in cranial and abdominal sides, such as lip, lip notch, and eye. The other defects could also be found in other part of the fetus. 3D ultrasound was more accurate than 2D ultrasound. All the cases with neural tube defects were followed up successfully. There were 22 cases with abnormal karyotypes, including 18 cases with trisomy 21 and 4 cases with other karyotypes, including trisomy 18. The pregnancies were terminated in 11 cases, including 9 cases of trisomy 21 and 2 cases of other karyotypes. There were 27 cases with normal karyotypes, and the outcome of these cases was further followed up. 3D ultrasound combined with real-time two-dimensional ultrasound is a sensitive, effective and reliable prenatal diagnostic method for neural tube defects, and it could be a new and effective diagnostic method for prenatal diagnosis of neural tube defects.
